## LOCAL ITEMS

The fourteenth annual Chinook Fair to-morrow (Friday, Aug. 5) is going to be bigger and better than ever. Reserve the day for a big time.

Miss M. E. Hallman left on Saturday for Toronto, where she will spend a holiday.

O. L. Mielke was a visitor in Drumheller on Sunday.

Several Masons from Chinook attended a Masonic meeting at Hanna on Tuesday night.

Bert Smith was a visitor in town over the week-end.

Mr. and Mrs. Edmund Neff, of Hanna, are visiting this week at the home of Mr. and Mrs. Chas. Neff.

Get your car decorated for the big parade at Chinook on Fair Day, Friday, August 5.

J. W. Deman was a visitor in Calgary on Sunday and Monday.

The Anglican service of morning Prayer at Chinook will be held in future at the school, by kindness of School Trustees. Next service will be August 21, at 11 a.m.

Robert Smith was a visitor in Edmonton over the week-end. While in Edmonton Mr. Smith met Rev. and Mrs. Geo. Kettles, formerly of Chinook. Mr. Kettles is now principal of High Prairie Consolidated School, where he has been located for the past two years. High Prairie is a prosperous farming district in Peace River country 200 miles north-west of Edmonton.

Mrs. W. Isbister, who has been visiting relatives at Lakefield, Ontario, returned on Sunday.

Quite a number from Chinook picnicked at Dry Lake on Sunday including Mr. and Mrs. Rideout and family, Mr. and Mrs. Nelson, Mr. and Mrs. Petersen and son Clarence, Mr. and Mrs. W. Meade, Mr. and Mrs. L. Robinson and family, Mr. and Mrs. R. Whelan and Mrs. Edwards.

The following pupils of Chinook School have now completed their Grade XI standing: David Smith, May Todd and Douglas Smith.

Six ladies and three men went from Chinook to Youngstown last Friday to act as judges at the annual fair. There was a large attendance at the fair and many excellent entries in all classes.

J. W. Deman is now representing the Canadian Colonization Mennonite Board. Any one wishing to sell their land can list it with Mr. Deman.

Mr. Campbell, of the Coliholme district, has a nice field of rye in stock.

Mr. and Mrs. L. S. Dawson and family returned on Thursday evening after a holiday in the Edmonton district and Calgary.

Ted Nordin purchased a used Ford Coupe car last week from Cooley Bros.

## Rev. Dr. W. A. Lewis And Lord's Day Alliance

Dr. Lewis, of Calgary, representing the Lord's Day Alliance, spoke in Chinook on Friday evening.

The Doctor said, the work of the Alliance was frequently misunderstood. Some people had the idea that it was petty, and interfering in its operations.

He said one man blamed the Lord's Day Alliance because he was arrested for shooting on Sunday, which came under the Game law. Another was wrathful at the Lord's Day Alliance because he was brought into court under the early closing By-law. The Alliance simply stood for the principle, to give every man his right, namely one day's rest in seven. Thousands of people in Canada are enjoying the privilege of a weekly rest day, owing to the organization which he represented.

Dr. Lewis said, the menace to the Christian Sabbath to-day is not commercialism but the mad race for pleasure. He pleaded with the people to unite with the most serious minded of our Dominion to preserve, a sane, quiet worshipful, recreative Sabbath.

## Death of Mrs. W. Stevenson

The wife of Mr. Wm. Stevenson, a former resident of Heathdale, passed away at the family residence in Vancouver on July 20. The deceased was known to many in this district, where the family were held in general respect. Mr. and Mrs. Stevenson left Sheffield, England, in July 1916 and took up their residence in this locality, where they remained seven years, leaving for Vancouver in 1923. Sincerest sympathy will be felt here for the husband, one son, and two daughters, who survive.

## Spillers' Canadian Mill To Operate Soon

Spillers' Canadian Milling Co., Ltd., will begin operation of its big new mill at Calgary early in August, it is announced by W. A. Vernon, a director of Spillers' Milling and Associated Industries, Ltd., London, England, who is now on a business trip to Western Canada. The Calgary mill will have an initial capacity of 2,000 barrels of flour per day and will be capable of expansion as trade warrants.

## Cairn Marks Site of Old Police Post

Unveiling of the cairn in the grounds of the Fort Saskatchewan jail, which marks the site of the original buildings erected in October 1874, by Col. W. D. Jarvis and 20 non-commissioned officers and men of the first party of Northwest Mounted Police to enter the Edmonton district was carried out on Sunday, July 24, by Major General Grisham in the presence of a large gathering of old-time members of the famous force and citizens of the town.

F. L. Bassett, of Champion, arrived in Chinook on Wednesday and will be the manager of the National elevator at this point.

Mrs. L. Cooley left this morning for Carstairs, where she will visit relatives.

## "The Year's Greatest Melodrama"

## Canada's Next Stage Of Development

There are many countries with larger populations, greater accumulations of wealth, and much more highly developed in an industrial sense than Canada, but already this Dominion has achieved fifth place among the commercial nations of the world. Since the war, and more especially during the past few years, the trade of Canada has enormously expanded, the percentage of growth far surpassing that of any other country.

It is a pertinent question to ask: Can Canada retain for itself the proud position already attained, and is it possible for this Dominion to move steadily forward from fifth place to fourth, to third, and ultimately to the very front rank?

Judged from the standpoint of its geographical position on the world's highway between Europe and the Orient, or judged by the extent and variety of its natural resources, whether of the field, the forest, the mine, the fisheries, and water-powers, the answer can be given by an emphatic affirmative. In all these respects, Canada does not occupy a secondary position to any country on earth.

Canada practically controls the world's supply of such essential commodities as nickel and asbestos. It is now, in its infancy, the world's greatest manufacturer of newsprint and the world's greatest exporter of wheat. It has steadily increased its gold output until now it ranks as the world's third largest producer.

Notwithstanding all these advantages, can Canada ever hope to challenge the position of Great Britain and the United States as the world's greatest commercial nations, and, if so, what is essential to achieve that result?

Not only in order to attain a still higher and stronger position, but to retain what has already been won, it is necessary that Canada should take certain advance steps. Up to the present time this country has been chiefly concerned with those domestic problems and internal affairs involved in the early settlement and development of the country from a raw territory into an organized state. Attention has been devoted to matters of transportation, to the first stages in the development of natural resources, to laying the essential foundations of any country. This pioneer stage is passing. Canada has found itself, and its future now depends upon the place it can make for itself among the nations in finance, in trade and commerce.

The development of our wealth of natural resources must be the basic foundation upon which to erect our future national structure. These resources constitute the Dominion's greatest economic asset, and their development should proceed along the most approved scientific lines in order that there may be a minimum of waste. It is not sufficient that we cut down forests and sell lumber and pulpwood, or that we dig nickel, or asbestos, or gold out of the ground. We must utilize these resources to their fullest extent in the building up of Canadian industry, and, in so doing, also utilize every possible by-product that can be extracted from them.

In Great Britain, the United States, Germany, huge sums are expended annually in scientific research and elaborately equipped laboratories are provided for the prosecution of such work. Great Britain last year expended \$25,000,000 and the United States \$50,000,000 on research. If Canada is to hold its own, and is to go forward to greater triumphs, it must now become expedient in like manner. The expenditure of a few million dollars may easily result in discoveries and improved methods which will yield tens and even hundreds of millions to the Dominion.

Canada is an up-to-date country, but in order to retain that position it must follow the most up-to-date methods all along the line. It is not sufficient that goods "made in Canada" or articles "produced in Canada" be good; they must be the very best the world can offer.

Coupled with the maintenance of scientific research, the utilization to the utmost of our own natural resources, and the production of nothing but the best, the industrial and commercial interests of Canada must be alert and active in the adoption of the most wide-awake and effective selling methods, and create the organization essential to command the confidence of the importing world that all contracts entered into can and will be filled to the letter and on the minute called for.

The proposals which the Minister of Trade and Commerce will, it is understood, submit to Parliament at its next session to provide for important expansions of the activities of the National Research Council, as well as the practical suggestions he has brought with him from England along the line of improved selling and marketing methods, should receive the most earnest consideration of the Canadian people and their wholehearted support.

### Remember Canadian Soldiers

Graves in Shorncliffe Cemetery are Decorated Every Year

Annually for eleven years past the school children of Hythe, Folkestone and surrounding districts have made a pilgrimage to Shorncliffe cemetery nearby and have decorated the graves of the Canadian soldiers there.

An account of this year's ceremony, which took place on June 22, appears in a copy of the Hythe Reporter which a reader has been kind enough to send to the Star.

### Sunburn.

Mix Minard's with sweet oil or cream, and apply. Quick and permanent relief.

### Supplying Milk For Chinese

Shanghai Company Purchases Cattle In British Columbia

Despite its political troubles and the menace of invading armies, the babies of Shanghai must have milk and British Columbia cows will supply it, as in the past.

For several years the Shanghai Dairy Company has been buying its stock in British Columbia and shipping it across the Pacific to join the big herds quartered in the pastures south of the foreign quarter. It is this company which supplies most of the dairy produce for the use of European families quartered in Shanghai.

G. T. Ormiston and Captain Grant, representatives of the Shanghai Dairy Company, are in British Columbia on another of their buying trips. They are at present in the Comox Valley purchasing dairy stock. They will buy several hundred head this year.

"Wars and revolutions are a nuisance, but there is nothing more disastrous than a baby's demand for milk," said Ormiston. "We have got to meet the demand regardless of whatever else may happen."

### A WEAK STOMACH

Can Be Strengthened Through the Use of Dr. Williams' Pink Pills

Wonderful is the process by which the chemistry of the body changes the food we eat into blood. And the whole of our well-being depends upon this being maintained day after day, year in and year out. Sometimes the process becomes faulty, and then food begins to poison the blood instead of feeding it. This is followed by all the pains of indigestion, such as gas on the stomach, pains around the heart, often nausea after eating, and a dislike for all kinds of food.

The only way to overcome these troubles is to tone up the digestive so that you can assimilate all your food. To do this you have only to take Dr. Williams' Pink Pills. A short course of these pills will quickly tone up the stomach and banish indigestion. Here is a bit of convincing proof given by Mrs. Chas. Ladner, Elmhurst, P.I., who says: "For some years I was a sufferer from stomach trouble. Everything I ate caused distress, sour stomach, and belching. I could not eat meat or potatoes, and I grew weak and nervous. No medicine seemed to help me until I was persuaded to take Dr. Williams' Pink Pills, and those simply worked wonders. I took the pills faithfully for a couple of months by which time every symptom of the trouble disappeared, and there has not since been the slightest trace of stomach trouble. No wonder I praise Dr. Williams' Pink Pills."

You can get these pills through any medicine dealer or by mail. Send a box from The Dr. Williams' Medicine Co., Brockville, Ont.

### Western Canada Dairy Convention

The Western Canada Dairy Convention, which includes all dairying interests in the four Western Provinces, will be held in the Hotel Saskatchewan, Regina, from February 7th to 10th next. This Association will be hosts to both the inter-provincial gathering and the annual provincial dairy convention of Saskatchewan.

Miller's Worm Powders are a pleasant medicine for worm-infested children, and they will take it without objection. When directed and followed it will not injure the most delicate child, as there is nothing of an injurious nature in its composition. They will quickly rid a child of worms and restore the health of the little sufferers whose vitality has become impaired by the attacks of these internal pests.

### Million Acres Irrigated

Irrigation is now being supplied to over a million acres of land in the west, according to the Department of the Interior, and surveys are being made of a number of additional projects which should bring the total up to 1 1/2 million acres.

### Minard's Liniment for scaly scalp.

Most of us would like to get out of debt, but we really need a new car and the radio is a bit squawky.

## Babies Cry For "Castoria"

Prepared Especially for Infants and Children of All Ages

Mother! Fletcher's Castoria has been in use for over 20 years as a pleasant, harmless substitute for Laxative Oil, Paregoric, Teething Drops and Soothing Syrup. Contains no narcotics. Proven directions are on each package. Physicians everywhere recommend it.

The genuine bears signature of

W. D. Fletcher.

Eagle Brand has raised more healthy babies, since 1857, than all other infant foods combined.

Borden's EAGLE BRAND CONDENSED MILK

### Bravery That Counts

Doctor Going To Africa To Hunt Cure For Sleeping Sickness

A really sporting expedition is that which Dr. Arthur Tarnow will make next autumn to Central Africa. Most African hunters go after lions or elephants. There is much danger — to the lions and elephants. With the present type of expanding bullets which blow a hole the size of a man's head in the quarry's body, there is very little danger to the hunter.

Doctor Tarnow's hunt will be for something really dangerous. He is going to study the tsetse fly, hoping to find a cure for the sleeping sickness its bite causes.

Many doctors have sacrificed their lives in the study of this plague. May the brave Doctor Tarnow not be added to the roll.

### Radio Entertainers Well Paid

Some Get Hundred Dollars a Minute For Good Music

Does it pay to entertain radio fans? Here are a few figures dug up by the New York dramatic weekly, "Variety":

Toscanini, the Italian composer, who will direct the New York Philharmonic Orchestra on the air, will get \$1,500 for each concert.

Some hours, like the Maxwell, Broadway and Alway Kent, are said to pay as high as \$100 a minute for a quarter hour of good music. The Aquina Troubadours and Ishman Jones Orchestra will play together at Atlantic City, for half a month, for \$12,000.

Each member of the Broadway Revelers gets \$200 for each hour he's on the air.

Mothers Value this Oil. — Mothers who know how suddenly crop may seize their child and how necessary prompt action is in supplying relief, always keep at hand a supply of Dr. Thomas' Electric Oil, because experience has taught them that this is an excellent preparation for the treatment of this ailment. And they are wise for its various uses render it a valuable medicine.

### Cairn Unveiled

Where First Party Of Mounted Police Entered Edmonton Over Fifty Years Ago

Unveiling of the cairn in the grounds of Fort Saskatchewan, Alta., which marks the site of the original buildings erected in October, 1874, by Col. W. D. Jarvis and 20 non-commissioned officers and men of the first party of Royal North West Mounted Police to enter the Edmonton district, was made recently by Major-General Griesbach, C.B., C.M.G., D.S.O. in the presence of a large gathering of old-time members of the famous force and citizens of the town.

### Nature's Gentleman

"Thank you very much indeed," beamed the well-dressed flapper in the bus as a workman offered her his seat. "That was very kind of you."

The other blushed happily and gave a number of other males a hardy glare as he answered: "Not at all, miss not at all. I know some men don't give up their seats unless it happens to be a pretty girl, but looks like no odds to me."

And nobody except the young girl smiled.

Decrease In Butter Output Saskatchewan creameries manufactured 1,661,687 pounds of butter in May. This is a considerable decrease compared with the output for the same month a year ago. The falling off is attributed to the cool weather which prevailed during the period.

Wood yields one-fourth of the heat of coal; charcoal about the same heat as coal.

For corns and bunions use Minard's Liniment.

### Fraud Oil Exports

Self-Styled Oil Engineers Making Easy Money In U.S.

The United States Department of the Interior has recently issued a warning against self-styled oil engineers who have been offering their services to farmers and landowners to test the soil by a chemical or photographic process for determining whether or not oil underlies the property. The operators, who charge a fee of \$25 for an "examination," are stated to be claiming that they are experts working under the supervision of the government.

Inquiry in the Department at Washington has of course brought out the fact that no such specialists have ever been connected with its staff as a geologist, nor does the Geological Survey know of any method by which the presence or absence of oil a few hundred or a few thousand feet beneath the surface can be determined by a test of the soil, chemically, photographically, or otherwise.

It may easily happen, says the Natural Resources Intelligence Service of the Department of the Interior at Ottawa, by way of warning, that those operators when they find that the game is up where they are operating, will make their way across the border into Canada and endeavor to interest farmers and others in territories adjacent to the proven oil fields of Ontario, New Brunswick, and Alberta. They are known to have been working as close to the international border as Michigan. Instances of their operations should be immediately reported, as apart from the loss of fee charged, much harm in the way of false hopes aroused and consequent speculation might easily result from taking the advice of these self-styled experts too seriously.

Puring a corn is both risky and ineffective. It is much better to use Holloway's Corn Remover and eradicate them entirely.

### Italy Has World's Largest Grape Vine

Some Branches Reach Almost Seventy Feet From Trunk

What is believed to be the world's most remarkable vine grows in the province of Reggio Emilia, Italy. It has a trunk measurement of more than four feet in circumference, and its branches are supported by 20 elm trees growing near it. Some of its branches reach almost 70 feet from the trunk. This monster vine has been known to produce in a year a quantity of grapes equal to the average production of a small vineyard. It is known to be at least 100 years old and some believe it to be much older than that.

Our deepest sympathy is with the man of few words who is married to a woman who does a continuous monologue stunt.

Every 10c Packet of WILSON'S FLY PADS WILL KILL MORE FLIES THAN \$8.00 WORTH OF ANY STICKY FLY CATCHER

Clean to handle. Sold by all Druggists, Grocers and General Stores

### Grain Exchange Radio Station

Built At Yorkton For Distribution Of Market Prices

Radio Station "C.J.G.X." which is being built at Yorkton, Sask., by the Winnipeg Grain Exchange, for distribution of market prices and reports, is now nearing completion. The station building and steel towers have been finished and a studio furnished in the Colliett Block. Engineers of the Canadian Marconi Company are now at Yorkton installing the broadcasting equipment and it is expected that the station will be in operation some time during the second week of August.

With the establishment of this broadcasting station, the Winnipeg Grain Exchange will inaugurate a service of disseminating market prices and information direct to the farmers, in a more efficient way than has heretofore been done in the West. It is understood that in addition to the closing market prices of the day, the opening of the market and mid-session prices will be broadcast as well. The station will also provide musical programmes and other classes of entertainment at regular times on week nights, details of which will be announced later.

Asthma Can be Cured. Its suffering is as needless as it is terrible to endure. After its many years of refusal of the most stubborn cases no sufferer can doubt the perfect effectiveness of Dr. J. D. Kellogg's Asthma Remedy. Comfort of body and peace of mind return with its use and nights of sound sleep come back for good. Ask your druggist; he can supply you.

Beat glory springs from the silent conquest of ourselves; and without that, the conqueror is naught but the veriest slave.

Complete In Itself, Mother Graves' Worm Exterminator does not require the assistance of any other medicine to make it effective. It does not fail to do its work.

No pleasure is comparable to the standing up on the vantage ground of truth.

Men's wives, like their sins, are sure to find them out.

ALL 'ROUND BETTER THRESHING WITH THE WATERLOO Steel "CHAMPION"

These features of the Waterloo Steel "Champion" give you a lifetime of reliable service. Your threshing will be quicker, easier and better. Strongest frame made in any threshing. ## Farming Revolutionized

The Modern Farmer Lives Under Conditions Vastly Different From Former Days

The Kingston Standard emphasizes the revolution that is taking place on Canadian farms, a revolution that is keeping pace with that going on in all industry. The farmer knows that life in the country has not always been the idyllic existence the country-hungry city folks have pictured it. Only the "new farmer" cannot remember the struggle against nature and the days of sun-up to sun-down toil once the lot of the men and women on the farm. The modern farmer is as unlike his antecedents as the modern factory is unlike its prototype and as the modern city home is unlike the home of two decades ago.

On the farm today are found the automobile, tractor, telephone, electric lights and power, milking machines, harvesting and planting machines performing several operations simultaneously, the radio, the household comforts and conveniences of the city home and even leisure and recreation. The practical housewife would know the old farm today if she returned after an absence of two decades.

True it is that some farmers still employ the primitive methods of agriculture and refuse to emancipate themselves from their slavery to the soil by adopting labor-saving devices. And it is just as true that the agriculturists as a class have been slow to adopt modern methods.

The time is not long past when "newfangled notions" were exceedingly distrusted on the farm. The "old way" was good enough for the fathers and what was good enough for the fathers was good enough for the sons when they succeeded to the management of the farm. It was not vanity or obstinacy which caused some farmers to scoff at scientific methods in those days, the best of farmers sincerely believed that they could get out of the soil only what the soil yielded of its own volition.

The change on the farm has been nothing short of revolutionary and the revolutionists have been the men and women who for generations had stubbornly resisted change and impeded progress.—Morse Law Times.

### Sets Potato Standard

Prince Edward Island the Centre For Growing Pure Seed Spuds

Although the smallest Canadian province, Prince Edward Island is recognized all over America as being the centre of pure seed potato growing and thus justifying its right to the title of "Spud" Island. At the present time about 35,000 acres are devoted to potatoes, one-third of which is planted to Cobblers and Green Mountains. An interest in the growing of white varieties was stimulated in 1916 by the Federal Division of Botany, by locating good stock, demonstrating the beneficial results of spraying and by inspection service.

In 1918 the first car of certified seed was shipped from the island. After that seed potatoes were produced in various states, from which it became apparent that the island had seed potatoes for export of a quality seldom equalled and nowhere in America excelled. These seed potatoes meet the high standards set by the Government. All inspection is free to any one making application to the Federal Division of Botany, which has sole control of the inspection service.

### The Roll-Top Car

Since the roll-top deck has gone out of vogue, the roll-top car is coming in. Yes, the top is made so that it can be rolled back, and the passengers can enjoy the sunlight and scenery. Four firms in England with tops made movable so they may be rolled back in sunny weather. They're called Sunshine Saloons.

### The English Way

Dr. Robert Moore, fifty-seven, medical practitioner, of Mawney Road, Ramford, was at Bow Street police court ordered by Mr. Fry to pay a fine of £20 and £7 costs for being drunk while in charge of a motor car. He was also automatically disqualified from holding a license for twelve months.

Moaner—"Now, Jimmy, suppose you were to hand Willie a plate with a large and small piece of cake on it, wouldn't you tell him to take the larger piece?"

Jimmy—"No."

Mother—"Why not?"

Jimmy—"Because it wouldn't be necessary."

It is a curious fact that the more a woman looks straight and thin the more a man looks round.

## Counsel For Swine Breeders

Valuable Information Regarding Correct Feeding Methods. Conclusions in brief reached by the Dominion Animal Husbandman, G. B. Rathwell, B.S.A., in his recently published pamphlet on "Breeding and Feeding the Market Hog" are as follows:

Grow the frame first. The young pig from weaning until three and a half months old should receive a ration containing a minimum quantity of fibre.

Any system of feeding a bacon hog, during the first four months that tends towards the laying on of fat is drifting away from the type that will make into a desirable lean side.

Don't feed more than pigs will clean up. For the first four months the animal should clean his trough and look for more.

The pig is a naturally clean animal, cleanliness of everything he uses helps in the prevention of indigestion and scours.

After four months of age a system of feeding the breeders pig should be employed that will still tend towards growth, muscle, bone and frame rather than fat.

In the case of the market hog of from four to four and a half months of age the onward effort should be towards maintaining length and scale and at the same time acquiring finish through the use of more highly concentrated feeds such as barley and corn, and heavier feeding generally.

Rations should be palatable, readily digestible, properly balanced as to protein and carbohydrate, of fair succulence and varied as to constituents.

The pig being omnivorous his rations should contain a variety of suitable feeds.

Make changes in ration slowly. Strive to prevent the causes of diseases.

Feature exercise in breeding and growing stock.

Remember the feeder needs the frame but the packer wants the finish. Select market hogs with care.

### The Name "Dominion"

Was Not Created Especially For Canada As Many Suppose

Again the old controversy over the origin of the name "Dominion" for Canada has been revived, warmed into life by the Jubilee celebration. In a letter to the Ottawa Journal, L. E. Gosnell, an historian of the Confederation, produced evidence to show that the name Dominion was suggested by Lord Derby, then British foreign minister as a substitute for the name "Kingdom," recommended by Sir John A. Macdonald, his reason for the substitution being that the name "Kingdom" might lay on the republican prejudices of Canada's nearest neighbors. The authority for this statement is "Sir John Macdonald himself."

One fact seems to have been overlooked in this controversy. It is that "Dominion," as a name for a country or state, was by no means new at the time of Canadian Confederation. Long before then the State of Virginia had been familiarly known as the "Old Dominion." Many Canadians will remember in the early years of Confederation that Canada used to be called "the new Dominion." The use of the adjective in this connection may have been significant. Possibly it was used to distinguish the "new" from the "old" Dominion.

### Laziness Cause of Crime

Many will agree with the official police view that it is time we stopped "sentimentalizing" so much about the "unfortunates" who are criminals "because they have diseased minds." The great majority of criminals are criminals because they are too lazy to work hard for an honest living. The deliberately embark on a career of crime because it offers an easy road to wealth, and too many of them get off much too easily when apprehended and convicted.

### Wrongly Accused

At a fancy-dress carnival there was some confusion regarding the character one of the guests represented. He was attired in a Roman toga with appropriate et cetera.

"Pardon me," ventured an inquisitive person. "You're Titus Andronicus, aren't you?"

"What?" bellowed the Roman indignantly. "Me? Why man, I haven't even discovered where the bar is yet!"

Artist (to friends)—See that picture over there? Well, I painted it, and a million wouldn't buy it!

Friend—Well, I'm one of the million!

Smith: "That man of mine ought to be hung."

Smith: "Not hung—hanged!"

Smith: "Hing, I say, hanging is too good for him."

## Pure Seed Is Important

Absolute Purity Hard To Maintain But Extra Work Pays

The importance of using seed which is pure as to variety is measured to a considerable extent by the purpose for which the resulting crop is intended. If the crop in question is to be used for feeding purposes, especially on the home farm, a slight mixture or even a considerable mixture of other kinds of varieties may not be a serious matter so long as these varieties of kinds mature with the main crop and possess high productivity and quality. There are a number of varieties on the market which do not differ widely in regard to these matters, and which will, therefore, not be particularly objectionable if mixed to some extent with the main crop.

On the other hand it is a risky business to combine the use of seed which is not at least relatively pure. In the first place most districts are particularly adapted to certain varieties, which varieties, one year with another, are likely to yield better returns than are others. To allow an admixture of varieties which are of a lower order is to run the risk of reducing the value of the crop.

In the case of wheat grown for selling purposes, purity of variety is particularly important, as in this case uniformity of ripening has a direct bearing upon the commercial grade. Thus where there is a difference of even a few days in the date of maturity of different types in the wheat field the later type may be sufficiently prominent in the sample to cause a reduction of at least one grade. The practical importance of purity of variety is coming to be much more widely recognized than it once was, although there is still plenty of evidence that it does not receive the attention that it should by a considerable percentage of grain growers.

Absolute purity, of course, is difficult to maintain on an extensive scale, but if an honest effort be made to use seed which is known to be at least relatively pure, very considerable losses may be avoided.

### Produce Forestry Film

New Film Will Depict Forest Protection From A Graphic Angle

Gordon Dalrymple, assistant manager of the Canadian Forestry Association, is supervising the making of three new motion picture films for the Association. "The two sons of Mr. DuBois," tells a story dealing persuasively with two types of settler in Quebec, and present the idea of co-operation in forest protection from a graphic angle. Henry Kliffner, of the Quebec Department of Lands and Forests, is actively assisting. A second film shows the common causes of forest fires and how they can be prevented. A third film presents the Fire Ranger in such a light as to invite public respect and co-operation.

The city of Rome was offered at auction by the Praetorian Guard after the murder of the Emperor Perinax.

## Clergyman at the Throttle

Minister of the Gospel Drives a Motor Car

The Rev. D. W. S. Falls, who conducted the "New Outlook" Confederation tour through the west recently, assumed a new role and demonstrated the mechanical side of his make-up by driving the engine hoisting the Canadian Pacific special tour train into Winnipeg. In fact Dr. Falls not only handled the engine like an experienced driver, but looked the part as well, as the accompanying photograph of him sitting at the throttle proves.

The "New Outlook" the official organ of the United Church in Canada is an abridgement of the Christian Guardian, the Presbyterian Witness

and the Canadian Congregationalist, all established prior to Confederation. The party, made up of professional and business people from all branches of activity, left Toronto June 15, stopping at the principal centres en route to Banff. From here the mountain journey continued through the famous resorts of Lake Louise, Jasper and Windermere. The return journey was through a different mountain country, and when the party reached Port William on their return east, they boarded one of the Canadian Pacific lake steamers for the last down the Great Lakes. The tour terminated at Toronto July 15.

The return journey was through a different mountain country, and when the party reached Port William on their return east, they boarded one of the Canadian Pacific lake steamers for the last down the Great Lakes. The tour terminated at Toronto July 15.

## Making the Lakes Safe

Crew of Lighthouse Tender Has Hazardous Job

First to quit the harbor in the spring and last to return in the fall, the two ships Aurora and Mermaid offer adventures hazardous enough for any man who thinks fresh water sailing is a job for beardless boys. The two vessels are United States lighthouse tenders and the task of their crews is to keep Lake Superior safe for navigation by ordinary ships.

At the first signs of spring they sail out of the Duluth Superior harbor over rough seas with a cargo of buoys and a passenger list of lighthouse men, bound for their stations. When their work is done and summer has quieted the lake the bigger passenger and freight boats follow. In the fall, when storms have driven all the larger boats to port, the tenders put out again, gather up the buoys and the lighthouse crews and bring them back to harbor for the winter.

### "Monarchs of the Plains"

Appears To Be No Danger Of The Extinction Of The Buffalo

The 2,542 buffaloes that have been transferred from Wainwright National Park, Alberta, to the vicinity of Fort Vermilion, Northwest Territories, there to roam at large and forage for themselves, are thriving. Another 1,800 are being shipped from Wainwright this year to Fort Vermilion.

Since the original herd of 716 were bought by the Canadian Government from Michael Pablo at Rarald, Montana, P.S.A. in 1907 and put in the National Park at Wainwright the herd has increased to about 11,500. When the shipment of 1,800 to Fort Vermilion is completed this year, there will be a total of 2,545 in the Northwest Territories at large and over 6,000 at Wainwright. At the rapid rate of increase there appears now no danger of the extinction of these erstwhile "Monarchs of the Plains."

### Plans Perilous Voyage

A Nome-to-Seaside voyage in a kayak, or Eskimo skin canoe, powered with an outboard motor, is planned by Fred W. Youney, business man of Nome, Alaska. The perilous 2,500-mile trip never before attempted in a canoe, will be started in August, in an attempt to establish a record for a long distance trip in a skin boat. If the voyage is completed he plans to continue to New York via the Panama Canal. Youney said he probably would take an Eskimo reindeer herder with him.

### Air Taxicabs Are Cheap

Taxicabs cost the British passenger no more than hire of the humblest taxicab. Two-seated taxicabs can now be hired at a shilling a mile from Llandudno, Col. G. T. Henderson, who has opened an air-taxi garage at Brooklands, England. Experienced pilots are permitted to drive their machines alone at the same charge.

Life is a burden to some people and others are a burden to life.

## World's Smallest Seaman

Thirteen Years Old and Just Touches Four Feet Mark

When the Prince of Wales and Mr. Baldwin called for Canada on the Canadian Pacific liner Empress of Australia, they found aboard a boy who is believed to be the smallest seaman in the world's mercantile marine. He is Frank Vincent, of Itchenand, and he just touches the four feet mark.

Frank recently he held the distinction of being the smallest page-boy in London. He was at the Royal Palace Hotel, Kensington, but, having reached the age, 12½, when he felt he ought to see the world, he decided to go to sea.

He called on Mr. D. H. Allan, chief catering superintendent of the Canadian Pacific Lines, and he had made no appointment, but he said, "Mr. Allan will see me, because, really he requires my services."

"Ticked by the six-foot assurance of the four-foot lad, the attendant showed him in. "Who are you?" the lad was asked.

"The smallest page-boy in London, and I want to go to sea as a boy."

Mr. Allan, who himself started as a boy-boy, was sympathetic, but surprised. "Why," he said, "you'll be a problem. We'll have to make a special midget uniform for a Peter Pan like you. What size shoes do you like?"

"Three."

Young Vincent persuaded Mr. Allan that size was no handicap, and he got the job he wanted. He was sent to be specially measured, was fitted out in brown and gold, with the tiny black shoes and white gloves that a baby might wear, and, smiling happily out of his frank blue eyes, he made his debut at sea during the week-end, when the Empress of Australia came round the coast from Greenock to Southampton.

### Scotch Nobles Stage

Historical Event

Withdrew Many Heirlooms From Museums For Brilliant Performance

The massed nobility of Scotland, taking the roles of their ancestors, staged a three-day pageant at Craig Millar Castle, near Edinburgh, before the King and Queen and the Prince of Wales. Three thousand performers with hounds, falcons, stags and many horses, were specially trained by Sir Frank Benson, veteran Shakespearean actor.

Many of the nobility withdrew heirlooms from museums, but reproductions had to be made for many of them since it was found that the size of mankind has grown since the sixteenth century, practically all of the armor being too small, although some of the swords swung by knights in combat are hardly liftable by their present successors.

Curious vestiges of the earlier civilization included muzzles for women placed on those of slanderous tongue.

A scene depicted the meeting of James IV, of Scotland and Princess Margaret Tudor, daughter of Henry VII, of England, at Craig Millar after their wry marriage in England, the event which eventually led to the union of the crowns.

Six hundred girls danced in the chorus, and then the jousting was reproduced.

### Not Likely To Suit

Present Day Citizens Would Not Like Life Of 200 Years From Now

If a present-day citizen were transplanted 200 or 300 years forward in history he would be impressively shocked at what he'd find, thinks J. B. S. Haldane. America's Pilgrim Fathers would have been much happier under King James I. In seventeenth century England than under President Coolidge in twentieth century America, and their Catholic great-grand-parents would have been equally horrified by the seventeenth century, he adds.

So if you sometimes think you would like to see what life in the world would be like 200 or 300 years from now you may be reasonably certain that it wouldn't suit you, comments as well it does now, Henry Capper's Weekly.

### Could Not Be Mistaken

President von Hindenburg went to the Zoo to view the two Zebras recently sent to him by the Regent of Abyssinia, but the President, who is a confirmed hunter, was much more interested in the large herd of deer than in the zebras.

He was accosted by an American tourist, who shook his hand vigorously, adding:

"I'm from America."

To this the soldier-President, vastly exclaiming his hand, responded:

"Indeed, so I see."

## Migratory Birds Convention Act

Law Of Protection Of Birds Dated On Treaty With United States

A summary of the Migratory Birds Convention Act is given below. This is the law which is based upon the Treaty with the United States. Any Treaty concerning this law may be addressed to the Commissioner of the Canadian National Parks, Department of the Interior, Ottawa.

The open season, both dates inclusive, are:

Saskatchewan: Ducks, Geese and Coos, Wilton's or Jack-nip, Sept. 15 to Dec. 21.

Alberta: Ducks, Geese and Coos, Wilton's or Jack-nip, Sept. 15 to Dec. 11.

There is a closed season in the Province of Saskatchewan and Alberta on hand-billed plovers, swans, wood ducks, older ducks, cranes, curlew, wildfowl, upland plover, black-bellied and golden plover, greater and lesser yellowlegs, greater and lesser yellowlegs, avocets, dowitchers, knots, oystercatchers, phalaropes, stilts, surf-birds, turnstones, and all the shorebirds not provided with an open season in above schedule.

There is a closed season throughout the year on the following non-game birds: Anks, anklers, bitterns, falcons, juncos, grebes, railroads, gulls, herons, penguins, moos, murrelets, petrels, shearwaters and terns; and there is a closed season throughout the year on the following insectivorous birds: Bobolinks, catbirds, chickadees, cuckoo, flickers, flycatchers, grosbeaks, hummingbirds, kinglets, martins, meadow larks, blackthroats or bull bats, nuthatches, orioles, robins, shrikes, swallows, swifts, tanagers, titmice, thrushes, vireos, warblers, waxwings, whippoorwills, woodpeckers and wrens, and all other perching birds which feed entirely or chiefly on insects.

No person shall kill, hunt, capture, injure, take or molest migratory game birds during the closed season. Sale of these birds is forbidden.

The killing, capturing, taking, injuring or molesting of migratory insectivorous and migratory non-game birds is prohibited. The possession of legally taken migratory game birds is allowed in Alberta until March 21, following the open season, and in Saskatchewan until the last day of February following the open season.

Daily Bag Limits are as follows:

Saskatchewan: Ducks and geese, 30 of all kinds in one day, but not exceeding to exceed 200 of all kinds in a season but not to exceed 20 geese; Coos, 25; Wilton's Salp, 25.

Alberta: Ducks, 20 in one day and not more than 200 of all kinds in a season; Geese, 15; Coos, 25; Wilton's Salp, 25.

The use of automatic (auto loading), swivel or machine guns, or battery or any gun larger than number 10 gauge is prohibited, and the use of any aeroplane, power boat, sail boat or night light, and shooting from any horse-drawn or motor vehicle is forbidden.

The shooting of migratory game birds earlier than one hour before sunrise or later than one hour after sunset is prohibited.

Every person who violates any provision of this Act or any regulation shall, for each offence, be liable upon summary conviction to a fine of not more than three hundred dollars and not less than ten dollars, or to imprisonment for a term not exceeding six months or to both fine and imprisonment.

### Out Of Practice

A rotund woman in Florida, presenting herself as a candidate for confirmation, was asked to repeat the Creed, the Lord's Prayer, and the Commandments. She got through the first two fairly well, but when it came to the last she hung and hesitated, and finally remarked in a confidential tone to the officiating clergyman, "De fac' is, Ah hasn't been practisin' de Ten Commandments lately."

### Wedding Was Quiet

A very quiet wedding took place recently at Jacksonville, the bride, the bridegroom, the best man, the bride-maid and the officiating minister all being deaf and dumb. At the reception after the marriage ceremony, there were twelve deaf and dumb guests.

Customer: "Quarter of a pound of Sarah Announce, please."

Chef: "You mean salt ammoniac."

"Yes, I believe it is sometimes vulgarly called that."

Don't think that a man is foolish because he thinks that you are.

Common sense is now too rare.

WORLD HAPPENINGS  
BRIEFLY TOLD

Laden with the spoils of their many victories, the greater number of members of the Canadian Blaise team are returning to Canada.

Special despatches from Tomsk say that the Siberian authorities have placed a ten-year ban on sable hunting. Extinction of the animals shortly, if the present intensive slaughter is continued is feared.

His Majesty the King has conferred a knighthood of the Order of St. Michael and St. George upon Dr. W. F. Grenfell, known for his work among the sailors and fishermen of Newfoundland during the past 25 years.

Patrick Dolan, who was elected as a Republican for Dublin county and a signer of the protest of Eamon De Valera against the oath to the king, took the oath and his seat in the Dail. There was no demonstration when he made his appearance.

Reports that stray buffalo from the herds moved north from Vainwright have been making trouble in the farming country around Fort Vermilion are to be investigated. Complaints have been made that some 15 animals of the first contingent have mixed with some cattle and destroyed crops near Vermilion.

The Post Office authorities are issuing a warning that all parcels addressed to Great Britain and other countries must be fully prepaid when dispatched from Canada, as postmasters are instructed to see that every effort is made to prevent the mailing of shortpaid parcels to places outside of Canada.

Coal production in Saskatchewan during the first six months of this year exceeded by 7,388 tons the output of the province for the same period of 1926. The official figure issued by the Provincial Labor Department is 194,578 tons. This mark was surpassed in January to July of 1925 by nearly 9,500 tons.

## E. P. Ranch Improved

House Has Been Enlarged and Property Is Beginning To Yield Returns

Many improvements have been introduced on the E. P. of Walter ranch since his last visit in 1921. The property is beginning to make some return to its Royal owner for the sums he has spent in stocking and developing it.

It has always been the Prince's ambition to make his ranch, more than anything else, a model of its kind and an example for other farmers in the Dominion. The E. P. Ranch extends more than 6,000 acres, small as important ranches go, but it is high-grade land, and is one of the richest grain-growing and stock-raising regions to be found in Western America.

The ranch house has been enlarged and otherwise improved since his Royal Highness last saw it. A new lounge hall and extra bedrooms have been added. The whole dwelling is simply furnished. A few comfortable lounge chairs, a well-filled book case or two, and one or two water-color pictures of neighborhood beauty spots are the only appearance of "luxury."

Its sporting equipment, however, is very complete, and the Prince is able to enjoy good sport. On his own property wild ducks abound on one or two small lakes and on a tributary of the High River that winds through the ranch and provides it with water. Mountain trout are numerous in this stream, some of them attaining considerable size, while not far away prairie chickens and partridges are to be found in flocks at certain seasons of the year. When bigger game is sought, the Prince has not much farther to ride before he comes across the trail of herds of wild deer that range over the foothills of the Rockies.

## Discontinue Bird Sanctuary

Lac LaPiche, after some seven years as a bird sanctuary, is likely to be discontinued as such. The Alberta game branch is advised that the Dominion parks department is now considering its abandonment and the reservation of other lakes in the vicinity instead. This action is understood to be the outcome of an agitation by settlers around the lake, who have asked to have the restrictions lifted.

Customer: I want to return this book I bought, "Stories for All Occasions."

Bookseller: What's the matter with it?

Customer: It's a fake! There's nothing there for a man to tell his wife when he gets home at 2 a.m.

W. N. E. 1892

## A Difficult Salvaging Job

Raising Of German Battle Cruiser Is Remarkable Feat

Draped in slime and seaweed, the keel of the battle cruiser Moltke has been lifted above the surface of the water in the old anchorage ground at Scapa Flow in the Orkneys, where the German fleet was interned after its surrender in the Fleet of North on November 21, 1918, and where the vessels were scuttled by their crews on June 21, 1919.

When the wreck is finally beached in shallow water to be broken up, one of the most difficult jobs in the history of salvaging will have come to a successful conclusion. The 27,000-ton Moltke, another of the scuttled battle cruisers, was raised with less difficulty. She lay on an even keel, so that lifting her, while a tremendous job, was a straight textbook problem. The lifting of the Moltke, which turned turtle as she sank, has presented great difficulties. In her case the successful salvaging work has been due largely to the ingenuity of E. F. Cox, a spare, nervous, pallid Londoner in his early forties, who at Scapa Flow is usually found smeared from head to foot with grease and rust.

Mr. Cox is a shipwrecker and scrap iron merchant who never did a salvaging job in his life until he went to Scapa Flow three years ago. In the lonely Orkneys, which lie so far north of Scotland that you can read a newspaper outdoors at midnight at this time of year, he and a gang of 100 laborers have lifted 22 scuttled destroyers, the battle cruiser Moltke, and now the Moltke.

In ordinary salvaging no two jobs are ever exactly alike, and that holds good at Scapa Flow, where the scuttled vessels lie in every conceivable position. Mr. Cox has pumps capable of handling more than a ton of water a second. He has pneumatic hammers, drills and riveters capable of delivering 1,500 blows a minute, either under water or above the surface. He has electric lamps to illuminate the water in the slimy hold of a sunken vessel. He has a huge pontoon of various sizes, shaped so that they fit closely to the outer skin of a sunken ship. These when fastened into place beneath the water, are pumped out and draw within them the lifting power. His salvaging ship—a floating machine shop with derricks capable of handling weights up to fifty tons—is powerful engines for towing.

To Suit the Needs of the Small Boy

The small boy's suit for play wear may be both practical and money when fashioned on the lines of the model pictured here, which is made of tan and navy striped duro. It has a round flat collar and fastens in the centre front with buttons and buttonholes. The back is plain with a drop-seam, and the set-in sleeves may be long or short. The legs are loose at the knees, and an upper and lower patch pocket trims the front. No. 1219 is in sizes 2, 4 and 6 years. Size 4 requires 1 1/2 yards 22-inch material, or 1 3/4 yards 25-inch; short sleeves require 3/4 yard less. Price 20 cents. Home sewing brings nice clothes within the reach of all, and to follow the mode is delightful when it can be done so easily and economically, by following the styles pictured in our new Fashion Book. A chart accompanying each pattern shows the material as it appears when cut out. Every detail is explained so that the inexperienced sewer can make without difficulty an attractive dress. Price of the book 10 cents the copy.

## How To Order Patterns

Address—Winnipeg Newspaper Union,

175 McDermott Ave., Winnipeg

Pattern No. .... Size .....

Name .....

Town .....

And even the six-deep beauty is apt to wear off in time.

## Light Pierces Fogs

Rainbow Super-Beacon Light Can Penetrate Mists

Raymond R. Macchett, of New York, son of R. H. Macchett, one of the leading X-ray experts in America in the early stages of its development is demonstrating his rainbow super-beacon light, which penetrates fogs and makes possible airplane landings in bad weather.

The light, produced by devices invented by Mr. Macchett, has been exhibited at Hurdley and other aviation fairs.

"We have demonstrated that this light can be seen many miles away, perhaps fifty," said Mr. Macchett. "It is a form of electric illumination without a filament. It is a 'cold light,' or produced without appreciable heat, by passing an electric current through rarified neon gas. The color is an unusual orange red, of 10,000 candle power. On very favorable days one at Sandy Hook was seen fifteen miles.

Government agencies are manifesting interest in Mr. Macchett's process and the devices beside them. The Bureau of Standards made a favorable report on the light.

## Boats Were Held Up

Late Tide On Thames Caused Mild Sensation in London

The Thames—a rule is a most punctual stream and the steady ebb and flow of its tides are generally so certain to follow the figures printed in the shipping journals that any deviation from the expected produces a small sensation on the river. On a recent day, however, writes the London correspondent of the Christian Science Monitor, the flow was due to start at 8.51 a.m., but failed to put in any appearance until after 10. Many boats, including the passenger boats that are now taking thousands of holiday makers down the river to Margate, were held up for an hour.

"The Thames is really very punctual in its tides," said the river superintendent of the Port of London Authority, "but once in a while it acts up, and the tide is either early or late. The delay of the flow was due to westerly wind in the Channel and a change in the air pressure caused by the wind."

## Will Not Have Telephone

The Claims Division of the general government accounting office at Washington has 600 employees and not a single telephone. S. B. Tulloss, chief of the division, says his business is best transacted by correspondence, but his policy has drawn fire from many who criticize the slow methods employed.

## To Meet At Moose Jaw

Advice has been received by the Moose Jaw Board of Trade that the Union of Saskatchewan Municipalities has decided to hold its 1925 annual convention in that city.

No earthly tax dodger need hope for a clear title to a mansion in the skies.

Only those who can enjoy dining on air can afford to trust to luck.

## Stars Honeymoon at Lake Louise

Exploring hidden glaciers, fishing, hiking, and making a film of their own with a new camera they had purchased, constituted what Rod LaRouque and Vilma Ilnsky considered an ideal honeymoon. These two famous movie stars, who need no introduction to the American public, turned their backs on Hollywood recently for the mountain resort of Lake Louise in the Canadian Rockies, to spend their honeymoon. The accompanying photograph shows the six-foot-three screen star and his beautiful Hungarian actress bride, photographed as they were wandering along a quiet path not far from the Chateau Lake Louise where they were guests during their two weeks' stay in the mountains. The wedding was adjudged one of the most popular amongst moving picture fans, style experts and other screen characters, that Hollywood has ever known.

## Wounds Without Killing

Bullet Devised By Eastern Inventor Melts After Entering Body

Composed of glycerin, stearin and an antiseptic compound, a "deathless" bullet, devised by an eastern inventor, is intended to wound a person without killing him. It melts after entering the body, leaving a clean wound, but has force enough to stop a man at twenty feet, and would be fatal if striking a vital spot. A feature of the bullet is that it makes as much noise as an ordinary one when fired, so it would be of aid to a citizen in spreading an alarm. Tests showed that it penetrated a one-inch pine board, and it was also shot into a ham to demonstrate its properties.

"She's a finished vocalist, don't you think so?"

"I'm afraid not. They're calling her out again."

A watchmaker has more hands than a centipede has feet.

## SUNDAY SCHOOL LESSON

AUGUST 7

DAVID SPARES SAUL

Golden Text: Do not overcome of evil, but overcome evil with good.—Romans 12:21.

Lesson: 1 Samuel 26.

Devotional Reading: Romans 8:31-39.

## Explanations and Comments

1. Saul Seeks David's Life, verses 1-4.—David had taken refuge in the wilderness of Ziph, and Saul pursued him with three thousand men. Through spies David learned of his coming.

2. David Spares Saul's Life, verses 5-12. David came upon the place where Saul was encamped, and found Saul asleep surrounded by his followers within a barricade made by encircling wagons. David returned to his own men and asked, "Who will go down with me to Saul?" The proposed exploit must have appealed to all of them. Abishai, the son of David's sister, returned with David. They found the king still sleeping within the barricade of wagons, with his spear, the symbol of royal authority stuck in the ground at his head. "God hath delivered up thine enemy into thy hand this day," said Abishai to David, as he begged permission to kill Saul with his own sword. But David forbade. "Who can put forth his hand against Jehovah's anointed and be guiltless?" he asked. There was a sacredness attached to Saul's office, and though David could not honor the man, he could honor the king.

"We honor in our soldiers, not their worth as individuals, but the patrie color with which they fulfill their duty; should we not honor in our rulers, whatever their individual worthiness, the officers they represent?"

With a solemn oath, "as Jehovah liveth," David declared that God would carry out his own purpose; Saul should meet his death as God willed, not as he, David, willed; Saul might die by a sudden stroke or meet his death in battle as he eventually did; God forbid that he should kill him. "It will be remembered that in the play of Macbeth, Macbeth starts upon his tragic career when the witches suggest to him that he is to be king. In the play, the witches stand for supernatural forces. Macbeth can see no way of fulfilling the destiny predicted for him except through violence. The story of David is even profounder in its moral significance than the story of Macbeth. From a source which stood to the far reaches as supernatural, David, too, learned that he was to be king but his spirit was large enough to turn away from the course which to one of the Macbeth type would have seemed the sure road to the fulfillment of destiny." Bishop McConnell.

Taking the spear which was at the king's head, and the cruse of water as proofs of his visit, the two departed, and no one knew of their coming.

## Has Innate Terror Of Water

Haal Noah's Ark sunk a hundred feet before it scraped bottom, many of all the animal passengers would have had to exercise an acquired skill to reach shore and safety.

For man alone is incapable until his fight of his innate terror of the water and learns to swim.

Every person drowned through inability to swim is a victim of indifference. The parents, with half an opportunity who do not teach their boys and girls to swim are inviting destruction of the most precious fruit of their living.

Irish Public  
Safety Act

New Bill Involves Death Penalty For Possession Of Arms

President William T. Cosgrave's positive declaration before the Dail Eireann fixing the responsibility for the murder of Kevin O'Higgins on the extreme wing of the irregular army secured the passage of his drastic public safety act says a despatch from Dublin.

Some members, believing the murder was due to private vengeance, had hesitated to accord the Government the exceptional powers the new measure provides for. Particular objection was taken to empowering the police to search for documents, imprisonment for the possession of suspicious documents and deportation of suspicious persons.

The question was asked as to where departed persons would go, and it was assumed they would be unable to get passports. But Vice-President Dillly said the persons named at were only dangerous in Ireland and that passports would be given them to go anywhere else.

The organization which the Government believed to be responsible for the policy of assassination as a means of upsetting the state was described by Mr. Cosgrave as having cut loose altogether from association with Eamon de Valera, and was under the Republican Party's control. It was the remnant of the irregular army which in May, 1922, de Valera called off from the civil war. Arms were not surrendered at that time, said Mr. Cosgrave, and may still be hidden.

He declared also that documents which had been seized indicated that Irish revolutionaries had been trying to purchase artillery from Germany and rifles from Italy and France. He asserted that one section of the revolutionists threatened to shoot any who took the oath of allegiance to the British Crown.

The possession of arms will, under the new bill, involve the death penalty. Some members, while willing to give the Government the power it asked for against crime, disapproved of President Cosgrave's supplemental proposals altering the constitution to block de Valera's political agitation against the oath of allegiance.

## A New Idea For Health

Old Hail Breed Says Straight People Never Get Sick

A certain woman had "lost" her health, and being one of the fortunate few who may indulge their indispositions, she had spent years in the wake of specialists, watering places, baths and cantharides.

As still she ailed, she didn't imagine she was ill. She was ill! She had headaches, terrible, unbearable ones; she was nervous, tired, and despondent; she had pains all through her; she couldn't sleep.

One day she sprained her knee. She was roughing it on a western ranch this time trying to scare away the hoodoo of ill health by fresh air and sunshine. There was no doctor near except a little wizened old half-breed who lived in the nearest town some miles away. They hauled her in a Ford over a white alkali road, found the "doctor" playing poker at a gas station and smelling of fumes which were not of the remotest relation to gasoline.

He wanted to cash in before going to his office to attend to his patient. With a few dexterous twists and pulls, the knee was set, and a few drowsy minutes.

"Good work, Doctor!" said the wife of the ranch owner, when the patient was safely ensconced in the car again. "You see she's sort of an invalid and we're trying to take good care of her. She's been all over the world and still she's sick. Too bad this had to happen."

"Toll her to sit up straight and she will not be long sick," said the doctor with a grin. "Straight people don't get sick."

The invalid is about cured now. She decided to follow the little old fellow's advice. None of the specialists had told her the real truth. Her posture was wrong and she had suffered the tortures of the condemned as a result. I pass it along to those in search of health. "Straight people don't get sick" might be a good maxim to do in cross-stitch and hang over our doorways.

Neighbor: Why do you whip your little boy? It was the cat that upset the vase of flowers.

Parent: I can't beat the cat. I belong to the S.P.C.A.

Factory Doctor:—There's nothing wrong with you but badness.

Tired Iand: Wo't the Latin for that, sir, so's I can tell the foreman?

Sometimes money talks, but more often it stops talk.

## CANADIAN FARMERS TO VISIT DENMARK

Canada's first farmers' tour to the Old Land now being organized by the department of agriculture of the Canadian National Railways, is to go overseas January next. In addition to a tour of England and Scotland,

for a study of agriculture and marketing there, the farmers party will also visit Denmark, for a special study of co-operative marketing in the land of its birth.

The pictures above show scenes in Copenhagen, Denmark's capital,

where the farmers will spend a day or two in sight seeing, and also shows a typical Danish rural scene. During the visit to Denmark the farmers will see the famous people's high schools, and also the co-operative bacon factories.

Somebody's money talks, but more often it stops talk.

## Comprehensive Plans For Conserving Wild Life In Canada's Vast Northern Areas

Much is being done by the Department of the Interior to organize and conserve the vast territories lying to the north of the Prairie Provinces. It is fully realized that development of the natural resources will depend on a robust native population and an abundance of wild life in conformity with this realization game preserves have been set aside for the sole use of the natives; even the fur-trappers have been detailed to examine and report on wild life conditions; experiments have been conducted with a view to the introduction of new species of animal life; and regulations have been enforced with regard to the destruction of predatory animals. One of the most important experiments has been concerned with transferring to the Wood Buffalo Park at Fort Smith, of a large number of buffalo which were surplus to the Watwright Park, Alberta. The experiment has been watched carefully for three years and it is now known to have proved a great success.

To the end of 1926 nearly 1,000 buffalo were transferred from Watwright National Park, Watwright, Alberta, bringing the herd at Wood Buffalo Park up to over 5,000 animals. The movement for the present year started on June 9, when 150 yearlings, 72 two-year-olds, and 20 three-year-olds arrived at Watwrights. All herds. Shipments will be made regularly till this year's quota of about 2,000 animals is complete. Park wardens' reports repeatedly state the animals in the Wood Buffalo Park are very well conditioned and this is verified by other officers who have seen herds when travelling through the district.

As the progresses conditions existing in the District of Mackenzie are becoming better known, but, to date, although the Wood Buffalo Park covers an area of 17,200 square miles and rich meadows and protecting woods wherein the buffalo can thrive are known to exist, the extent of these and the number of buffalo which can be economically supported have not been ascertained. The area has never been mapped nor has a single mile of survey been run for this purpose. During the last session of Parliament money was voted for the purpose of undertaking an aerial survey of the park and surrounding district.

Another investigation which is being carried on in the Northwest Territories, with a view to the future development of the Mackenzie District, has reference to the suitability of the area for the support of reindeer. For the purpose of studying this problem the Department of the Interior in 1926 engaged the services of the brothers A. E. and R. T. Forsell, men of wide experience in the Arctic regions and with a broad knowledge of wild life. They are to investigate thoroughly all the conditions relative to the possibilities of introducing reindeer into the Mackenzie basin. Should conditions prove favorable the public investment which will be involved, even in establishing a minimum of 2,000 animals, will amount to a considerable sum of money.

The Forsell brothers spent eight months of last year investigating the underlying causes which have brought about the successful establishment of reindeer in Alaska. They worked down the Yukon river towards its mouth and took in by the way, Ketchikan and to Point Barrow, covering all the country to the southeast of the latter place, and finally reaching Alaktik in March, 1927. During the present year they are working out from the delta of the Mackenzie and will cover the Great Bear Lake district with a view to ascertaining how far the conditions in Mackenzie District compare with those in Alaska.

### Took No Chances

King Paul, who recently was received at Buckingham Palace, was determined to make none of the errors in royal or social etiquette which are, however, forgivable in a foreigner. When the visit was definitely arranged, he secured the services of a certain courtier who, for a princely fee, initiated him in all the intricacies of British Court ways.

### Chinese Money a Problem

Travelers in China have found the numbers of coins and the rates of exchange an almost unsolvable problem. There are more than 20 different kinds of money, with different amounts in different provinces. At one time there were 15 mints in the country working 24 hours a day.

## War Upon Speeders

### Protection Needed For The Decent Motorist On The Public Highway

Hon. J. L. Pearson, Minister of Highways in the Government of the Province of Quebec, is concluding his war upon reckless motorists, and for such is to be highly commended. Motor speeding is a potential murder. Every man who drives a car recklessly or in any fashion which invites an "accident" compels innocent riders in other cars to say nothing of pedestrians—to risk sudden death or dire mutilation. If this is not "potential murder" what is it?

The dangerous driver—whether he be drunk or only indifferent to the safety of others—is, as the Montreal Star points out, in precisely the position of a man who should fire a rifle at random down a busy street. He might hit no one. But he is none the less a "potential murderer" for it is not his fault if the people within range are lucky enough to escape.

We would jail the man with the smoking rifle. But we have not yet reached a development of public indignation which always leads us to jail the man with the smoking rifle. He must actually hit somebody before serious action usually is taken—and even then it is often not half serious enough. Stripping these law-breakers of their licenses is a step in the right direction, but only a step—little more, indeed, than a stumble. There must be protection for the law-abiding and decent motorist on the public highways.—Regina Leader.

## Winnipeg Newspaper Union

Important Is The Plaited Frock

"The importance of being in earnest—at least about plaiting—is emphasized in this one-piece frock of navy serge. It is a youthful frock which correctly and distinctively many occasions. The long sleeves and narrow skirt lend it to create fullness above the hips, indicate its last-minute-ness. There are groups of side plaits extending from the shoulders to hem in front, and one inverted plait in the centre back. The collar is versatile and may be worn high or low. No. 1294 is for misses and small women, and is in sizes 16, 18 and 20 years. For 21, 26 and 28 inches bust only. Size 18 years (36 bust) requires 2 1/2 yards. Shown in material, Price 26 cents.

The secret of distinctive dress lies in good taste rather than in lavish expenditure of money. Every woman should want to make her own clothes, and the house dressmaker will find the designs illustrated in our new Fashion Book to be practical and simple, yet maintaining the spirit of the mode of the moment. Price of the book 19 cents the copy.

## How To Order Patterns

Address—Winnipeg Newspaper Union, 175 McDermott Ave., Winnipeg

Pattern No. .... Size .....

Name .....

Town .....

Judge—"The man you struck will have to spend the rest of his life in a plaster cast."

Motorist—"Well, he beat my fender."

## Wealth In Words

### Vocabulary Of Fifty Thousand Needed Says College Head

Anyone whose vocabulary is less than fifty thousand words is "intellectually poor" in the opinion of Dr. W. W. Shrook, president of the Southern Illinois State Normal University. Speaking at the general session of the National Education Association here, he said:

"The newest dictionaries list more than 150,000 words. The man who runs down the columns of the dictionary and does not recognize one word in nine, or a total of 50,000, is intellectually poor. Each of us has a 'home vocabulary' of about five thousand words. All the rest of the fifty thousand or more we must acquire from various outside sources. 'All studies will, of course, enrich vocabulary, but literature makes the largest single contribution, and it is a vitalized vocabulary that literature contributes; furthermore, familiarity with literature gives phrasing power to some degree at least. The teacher of literature co-operates best with the teacher of rhetoric and composition when he develops in his student some capacity for feeling what Keats called 'the intoxication of the fine phrase.'"

## Over Million Horses In Saskatchewan

### Census Figures Show 991,864 Were Over Age Of Two Years

The total horse population of Saskatchewan for the year 1926 was 1,099,527, according to figures in the census of farm animals for the province compiled by the department of Trade and Commerce, Dominion Bureau of Statistics. Of this number 991,864 were over the age of two years. There were 5,252 mules recorded.

The number of cattle for the same period was slightly higher, the total being 1,152,262, made up of 296,253 calves, 681,527 cows, 126,719 steers and 21,718 bulls.

Sheep in the province in 1926 totalled 181,769, made up of 71,540 lambs under the age of one year, 81,757 ewes one year and older, 2,916 rams one year and older, and 2,556 weathers one year and older.

The number of swine for the year is given at 297,455, of which number 147,129 were under six months of age, 88,229 sows for breeding six months of age and older, 1,863 were boars for breeding six months of age and over, and 57,154 other hogs six months of age and over.

## Honey Industry Is Becoming Important

### West Will Soon Overtake East In Matter Of Production

Bee-keeping as a branch of farming is rapidly increasing in Canada. In 1921 total production of honey for the Dominion was 7,000,000 pounds, while last year it amounted to 21,000,000, a three-fold increase in the five-year period. The financial return to bee-keepers in 1925 was \$1,100,000, Ontario and Quebec are the chief centres of the industry, with Manitoba in third place. Saskatchewan, Alberta and British Columbia farmers are establishing apiaries in increasing numbers every year, and the west promises to soon overtake the eastern provinces in the matter of production. The Saskatchewan department of agriculture has appointed a specialist in agriculture to advise the bee-keepers of that province regarding the intricacies of the business thus recognizing its importance as a feature of farm enterprise.

## Big Caribou Herds

Herds of caribou, thought to number some 60,000 are reported to have been seen between Isaac Creek and Selwyn on the Yukon River. They were filmed by a news photographer from the steamer, White Horse.

## C.N.R. HONORS LINDBERGH

On the occasion of his visit to Ottawa to attend Canada's Diamond Jubilee Celebration, Col. Charles A. Lindbergh, world famous transatlantic flyer, was presented with a perpetual pass over all lines of the Canadian National Railways in Canada. The pass, which was specially executed in gold and enamel, was presented to Col. Lindbergh by Sir Henry Thornton, Chairman and President of the Canadian National Railways.

## Extra Care Needed With Country Radio

### Special Grounding Contrivances Necessary To Eliminate Danger From Lightning

The radio owner living in the country has a distinct advantage over his city cousin, as there is no interference from neighboring sets, high tension wires and similar apparatus, which means the reception of this popular invention in the towns and cities. But the man in the village and on the farm is also at a disadvantage, because if special care is not taken in the installation of the radio, the set may actually prove a menace during electrical storms. With modern fire lightning equipment at his command and with tall buildings and numerous pipes and wires to carry away lightning charges, the man in town has little to fear from his radio.

The man's which held up the aerial on the roof, warns Deputy Provincial Fire Marshal George P. Lewis, should never be higher than the terminals of the lightning rod system, and if the building is not rodged, it is a bad practice to have the aerial on the roof of any building. The safest plan is to have three wires, strung from masts placed at a short distance from the house. But this precaution alone is not enough, as lightning may strike the aerial, travelling down through the radio set in the house, burning and wrecking everything in its path. To prevent such an accident, country radio users are advised to install a double break, single pole knife switch between the aerial and the set. This switch must be of ample size, at least four inches long and the blade half an inch wide. The centre post of the switch is connected to the aerial, and at one end to the radio set and the other to a wire leading outside and down to a good ground connection. When the set is not in use, the switch should connect the aerial with the ground so that lightning would be carried safely around the receiving apparatus. A tag should also be attached to the set, warning people not to use the same during an electrical storm.

"No radio set should be installed without an approved lightning arrester," concludes the Deputy Fire Marshal, "but this piece of equipment should not be confused with lightning rods. The arrester is a simple device for protecting the radio receiving apparatus only."

## Demand For Trees

### Groves Of Trees Mean Contented Homes In The West

H. W. Lehman, inspector for the Dominion Forestry Branch at Lethbridge, says: "The demand for trees has been consistent from all over the west. This year we have orders for 8,000,000, as against 6,000,000 in 1925." Following his tour of the west, he said: "I find generally a more settled feeling. People are planning for the future. The old days, when farming was a mere today and gone tomorrow affair, have disappeared. Farmers are planting trees, and wherever a grove of trees is found, there you will find contented homes."

## Canadian Wood For Ships

Douglas fir from British Columbia will be used in all decks of the five ships to be built for the Canadian National Railways West Indies service, and Canadian woods of various kinds will be used for interior fittings. This was announced at Victoria, B.C., following representations by Hon. T. D. Pattullo, provincial minister of lands.

No peer comes to the House of Lords with his gloves on when the King is present. He appears unarmed before the sovereign, and in order that it may be made certain that he carries no hidden weapon, his hands are bare.

## Lord Grey On Relations Between Britain And Moscow In The Past And The Future

### Circle Egg Marketing

#### An Excellent Example Of The Value Of Co-Operation

The farming district surrounding Campbellford, Northumberland County, Ontario, provides an excellent example of the value of co-operation. The marketing of eggs on a circle basis began many years ago and had the good effect of inducing the farmers to work together in the marketing of this common product. After a few years growth of membership ceased and interest fell away, and it was largely through the influence of the good work of Mr. F. H. Baker, District Poultry Promoter of the Federal Government, that a reorganization was brought about and a new manager, with good business ability and possessing fine self-motivation, was appointed. That was four years ago when the membership was but 16 in all. The success of this system of marketing soon attracted additional members, who, on receiving the benefits of selling on grade, began to enlarge their flocks and take better care of their birds and deliver their eggs with increasing promptness and care. Farmers now marketing through the Circle number 150, who last year made a gross turnover of nearly \$200,000 in eggs. The growth of this Circle has gone on in a quiet way without canvassing for membership. The system of handling eggs has been improved from time to time. Recently a new style of small egg crates has been introduced for use in automobiles. These are designed to avoid breakage during transit which had hitherto caused annoyance by soiling the cushions and mats of motor cars. The Circle is owned and operated by the producers themselves, who are proud of their system and always ready to have its methods made known to adjoining neighborhoods who are interested in the poultry industry.

### Fattening Rabbits

#### Rations Recommended And Method Of Feeding

Rabbits, like poultry, should not be marketed as meat until they have been fattened, a process that takes from 20 to 30 days. Fattening should be begun at the age of 6 months and for this purpose the rabbits should be placed in small, narrow hutches, in a quiet place, without too much light. In a Dominion Department of Agriculture bulletin on rabbits the following ration is recommended: During the first few days of fattening they should be fed largely on green alfalfa, if available, good soft hay and roots. The green feed should be gradually diminished and replaced by such feeds as mashed boiled potatoes, mixed with bran, barley meal, or corn meal, or stale bread soaked in milk, with an occasional carrot or stick of celery. Feeding should be done three times a day, the noon meal being the lightest and the evening one the heaviest. The noon meal should consist of those elements that excite and whet the appetite. A few feeds of oats should be given the last few days before killing. The root feeds must be served clean without dirt or root hairs adhering, and they should be fed whole, never chopped.

### White Wild Ducks

#### New Type Of Feathered Tribe Has Come Into Existence

What is a rare sight in Canada or in any part of the world, a brood of white wild ducks, were seen at Brandon provincial exhibition grounds, rally despoiling themselves at the lake. Expert ornithologists have failed to give a satisfactory explanation for their existence, but there they are, showing that a new type of feathered tribe has come into existence, and that during the last few years.

The story is that about three years ago, R. M. Matheson, K.C., read in a Canadian magazine that J. Lake Morden, of Ontario, had found two white wild ducks in a corner of Lake Ontario and managed to secure them. Mr. Matheson at once wrote to Mr. Morden and had the article verified, was also given the promise that when the time came, a pair of the offspring of the strange birds would be sent on to Brandon. This was done in due course, and the result is the brood of white, wild ducks shown at Brandon.

Only one complete team of horses came safely through the war. In 1914 they went overseas with a battery of artillery. Their last task was to draw the gun-carriage of the Unknown Soldier in Paris. They are now pensioned off.

The relations that have existed, and that should exist in the future, between Great Britain and the Soviet government in Moscow were analyzed and discussed in a speech delivered by Lord Grey of Falindon, the war-time British foreign secretary. Lord Grey recalled what, he said, many forgot. He said it was not the Bolsheviks who upset the Tsar's government. It was Kerensky, who aimed at establishing a Liberal regime, which was, though, being superseded by another despotism imposed by the Bolsheviks, with greater efficiency, than that used by the Tsar's government.

The Soviet policy is not national, in that it does not promote Russian national interests. It purports to cause world revolutions, on the pattern that has been carried out in Russia. The phrase has not been discovered, "a world-revolution which Moscow is the head." Here, then, is the difference between the Soviet government and every other government in the world.

The Soviet government is anti-democratic. "Being a dictatorship or despotism, it was anti-democratic and anti-parliamentary. It ruled not by consent, not through parliament, but by force." But the policy of world-wide revolution will fail because it is anti-national. "That was why it was breaking down in China." Communism has not failed, too, because "it was anti-economic." Facts of actual conditions and industrial statistics in Russia cannot be got. "People who went to Russia for short visits, not knowing the language, and were shown what it was thought they should see, had no means of seeing anything more."

"Domestic fanaticism was anti-religious," said Lord Grey. "It wished to destroy all religions. The civilization which we valued today had been the outcome of various religious movements. Anything which proposed to scrap the past, to say that religious movements counted for nothing, or that the old ideas of morality and the values which had hitherto obtained as between truth and falsehood should go—any movement on those lines was working to deprive humanity of something to which it would always aspire, and in that way it was bound to fail."

In the future, "our policy should be, so far as the internal affairs of Russia were concerned, to leave them absolutely alone. There were people who said it was a mistake to break with Russia the other day. There was a good deal to be said on both sides; but the thing had been done," and Lord Grey said he hoped "no British government, to whatever party it might belong, would resume relations with Moscow on any footing which was not genuine and sincere. The essence of resuming relations with the Soviet government should be that the policy of world-revolution was professedly and practically abandoned, that the government professed itself, and in present action, Government pursuing Russian national interests. Let that be the primary condition of any resumption of diplomatic relations with Russia. If they were resumed without that condition being clearly understood and secured, the relations which any government might try to re-establish with the Soviet government would be bound to result in deception, disappointment, and failure," said Lord Grey.

### Roads Through Indian Reserves

By an agreement between the British Columbia Government and the Federal Government, roads through Indian reserves in the province will be owned by the province. At present they are held by the Federal Government for its wards, the Indians. The arrangement will be ratified formally shortly, following negotiations between Hon. W. H. Sutherland, Minister of Public Works, and the federal authorities.

### First Crop Is Best

Seven years of tests by the College of Agriculture, University of Illinois, show that the production of red clover seed is highest when the first crop, and not the second, is used for seed. It has been the custom of farmers to use the first or spring crop for hay, and the second crop for seed.

"I liked London and Paris very much."

"They must be wonderful."

"But the best part of the whole thing was the trip over. Don't miss it if you ever go abroad."

Hobos are like famished albatrosses—they always shriek from washing.

# Genuine ASPIRIN

Proved safe by millions and prescribed by physicians for

Colds Headache Neuritis Lumbago  
Pain Neuralgia Toothache Rheumatism

**DOES NOT AFFECT THE HEART**

## Safe

Accept only "Bayer" package  
which contains proven directions.  
Handy "Bayer" boxes of 12 tablets  
Also bottles of 24 and 100—Druggists.

Aspirin is the trade mark (registered in Canada) of Bayer Manufacturing of Monroville,  
producer of Salicylic Acid, "A. S. A. M." Within it is not known  
that Aspirin means Bayer manufacture, to avoid the public against imitations, the Tablets  
of Bayer Company will be stamped with their general trade mark, the "Bayer Cross."

## PAINTED FIRES

BY NELLIE L. McCLUNG

COPYRIGHT, CANADA, 1923

CHAPTER V.—Continued

"The girls agreed, and so it came about that Helmi Malmgren got her first invitation to a party. She was in the basement, cleaning out Miss Abble's fire cellar, when the invitation came. Two girls both dressed in the pleated skirt and middie she so much admired, stood at the back door asking to see her. Lucy Powers was the speaker, and the invitation was properly given. The only difficulty was in the fact that Helmi did not understand, Miss Abble received the invitation and undertook to see that Helmi was present.

The basement of Young Methodist Church is the ordinary church basement, reached by a stairway that is worn shabby and gray by the passing of many feet, but to Helmi that September evening when two girls came for her and took her arm to conduct her (latterly it was a palace of enchantment).

They proceeded at once to the lower room, where small parties were held, and here, due to the decorating committee, opened a scene of loveliness that made Helmi catch her breath. Autumn leaves made of the sue paper ran in festoons from the electric fixtures over the table to each corner of the room. These were the Autumn decorations made by the girls at one of their meetings, and would later be replaced by the fall leaves and black cats, white cats and pumpkins. A stone crock filled with crimson and purple asters stood in the middle of the table, and from it there went out to each plate ropes of amaranth from Lucy Powers' greenhouse. A broad band of Autumn leaf crepe paper ran down the middle of the table, and at Helmi's plate was a hand-painted card with the leaves and Maple Leaf. On it was printed "Welcome to Canada." The streamers of Autumn leaves above the table made it easy for Helmi with her quick imagination to believe the table was spread in some small glade under the golden and

crimson foliage which in a frolicsome velvet wind, might come falling gently down.

The table sparkled with color—salads, ornamented with white and yellow daisies (hard boiled eggs); red flowers and green leaves (petals of beets and leaves of lettuce); platters of cold meat edged with asparagus leaves, with velvet red blossoms peeping through, and jellies, amber and yellow, showing geometric designs of oranges and bananas securely and mysteriously suspended.

The crowning glory of the table—positive proof that it was a real party—was the high sherbet glass filled with red orange juice, white grapes and grapefruit, with a red cherry on top riding at anchor! One at each plate.

Helmi breathed ecstatically as she gazed. Her cup of happiness was full. In addition to the gaily around her, she had the exquisite rapture of knowing she was suitably dressed. The very day the invitation came Miss Abble had taken her down town and bought her a pleated skirt, a middie and a red tie. She was dressed just like the others.

Helmi wondered if this is what Heaven would be like. She had some vague ideas on the subject of heaven which had come to her in her busy, crowded life as a child. She believed that is Heaven one's boots would always be new and smooth; that one would sleep alone, and that one would always feel stylish.

Helmi felt very solemn about coming to the church to eat. It seemed queer to be asked to have supper at God's house. To Helmi, God was a terrible person, whom people only thought of when some one died, or in thunderstorms, floods, famine or sickness. The God she knew was not concerned about sinners, or good times. He looked down with terrible burning eyes, seeing everything from his white throne in the sky, and could wither bad people with one scorching blast. Helmi had read that, for was not Peter Stari found blackened and dead beside his door, though his horses were not touched, just because he had cheated the stockkeeper? And it was a wonder he did not smite Peter's wife and children, too, because they cried so, Peter had been kind to them. Helmi had always thought God had been pretty quick and hard on Peter, but people must not say what they think when it is about God.

And now here she was in God's house for supper, and around her were fifteen girls of her own age, all making her welcome, and everyone as happy as if they weren't at church at all. And they sang some words at first to welcome her, that had never before, and then they looked at her when they sang:

"How do you do, Helmi, girl, how do you do?"

Is there anything that we can do for you?

We are glad you've come to stay in this land of work and play. And we welcome you today.

Helmi, girl!

Miss Rodgers talked a little then, and the girls all put their heads down, and Helmi knew it was a prayer, and she had never noticed all before. Then they began to eat, and by watching the other girls Helmi managed very well. After the fruit cocktail with the cherry (and fruit) it had, there came a red and green chow in a lovely glass dish, and a glass cover, too, with an acorn handle; and

cold pork and beef, and pickles, and fresh biscuits that Lucy Powers had made herself at school. Lucy managed to get this over to Helmi through the medium of her meagre English, supplemented by signs. And for dessert there was less exciting, but pink and white, with nuts and cake and cocoa.

And the dishes were beautiful, with green ropes and pink roses, and somehow it seemed to bring God nearer than anything to know He liked pink roses on His dishes. They must have a nice God in Canada!

When the supper was over the girls all stood up and sang with hands clasped. Helmi stood between Lucy and Mattie. The music was strange, the words unintelligible, but the hand-clasp was warm and friendly. Helmi understood it and thrilled with a great new passion. In God's house she had been a guest and had found friends.

The leader presented her with a little Testament and a Blue and Gold Book which had her name in it, right on the front page. Lucy showed her some words and said them to her over and over again, and although Helmi did not know what they meant, she learned to say them, and because these words were vibrant with youth and hope and eager aspirations they fired her young heart with a great desire to live properly and serve humbly. She belonged now, she had her own gang. She wanted to do something for God to show her love for Him, for her new country and these new friends.

Very early the next morning, when the crystal dawn, cool and sweet, was stealing into the sleeping porches on Chestnut Street, there came stealthily a young girl with a scrubbing ball and brush to the locked door. Trying it and finding it locked, she went round to one of the windows in the tower room, the one which had been just above her head. It yielded to her careful touch, and in a moment she and her pal had gone in.

That morning when the janitor came grumbling to his task a strange scene met his eyes. From the tower room across the damp incense of a well-scrubbed floor, polished windows, shining woodwork—hardly, honest smell, clean soapy, satisfying.

"Maybe I was wrong about them youngsters; they've got some religion after all," he said.

As Helmi went around her work the next day she sang the tune of the song, but she could not quite get the words. Miss Abble phoned to Lucy Powers to come over and tell her what it was that Helmi was singing. Lucy taught the words to Miss Abble, who then the "Land" and "Ald" and her house the next week was very proud to have them hear Helmi sing. "This has only been one night at the Club," said Miss Abble proudly, "and look what she has learned!" Miss Abble knew very well the minister's sister would think that the girls could have taught her "Ald With Me" or "Singing in the Morning," or something like that, but she was prepared to tell Miss Terry that times were changing.

(To Be Continued.)

## Motoring Unsafe in Persia

Roads Are Different and Traffic Worst in World

There are still a few adventurous occupations left in the world for those who care to seek them.

Carrying the Persian mail is one, for Persia has few railways and only one or two open ports. Teheran, the capital, is 500 miles from the Iraq frontier, and in a week the consular mail leaves Baghdad for Khaman on the Iraq-Persian border, and is there transferred to motor transport. In three days with luck, it will reach Teheran.

Nowadays the Persian roads are "safe." That is, they are normally free from brigands, for Reza Shah has instituted several reforms in connection with the surveillance and improvement of communications. But safety has a restricted meaning when applied to motoring in Persia, for a Persian road is different from all others.

Here and there it is bare earth level by the passage of countless caravans on the Golden Road; here it is roughly fortified by mud thrown down for future caravans to flatten; and there it is a mountain track sloping dizzily to alarming precipices.

And the traffic on the Teheran route must be the heaviest in the world. Long strings of camels strung along at two miles an hour, and when alarmed by the host of a motor-horn struggle with incredible clumsiness to the wrong side, and then, still more clumsily, back again. Processions of carts full the whole road, cars driven by two horses and large covered wagons drawn by four horses abreast, with an extra pair led behind to assist in uphill work.

Pools sometimes rush in and with while wise men are investigating.

## "Swat the fly" with GILLETT'S LYE

A teaspoonful of Gillett's Lye sprinkled in the Garbage Can prevents flies breeding

Use Gillett's Lye for all Cleaning and Disinfecting

Costs little but always effective

## Canada's Student Body

Eighty-three Colleges in Operation in Dominion Last Year

Canada had eighty-three colleges in operation last year. Of this total, there were 42 affiliated institutions, including 21 classical colleges, little seminaries and independent non-subsidized classical schools in Quebec, 30 theological, 4 agricultural, 2 law, 1 military, 1 technical, 1 commercial, 1 pharmacy and 1 veterinary.

The total registration of these colleges was approximately 7,752, in addition to 2,629 included with secondary technical institutions. This registration, according to the Dominion Bureau of Statistics, composed about 5,000 doing work of university standard, 6,500 work preparatory to matriculation, and the remainder taking vacation courses, extension courses, evening courses and the like.

Of the students of university standard, by far the largest group were in arts, with a total of 2,053. Theology, philosophy, medical and missionary courses and related subjects ranked second with 1,124. Agriculture was third with 450, and law fourth with a total of 401. Pharmacy had 144 students, commerce 132, veterinary science 66 and engineering 29. Practically all the students of university grade were full time students.

## Will Be Great Advantage

Steam Cooled Auto Engines Possible in Few Years

"We'll have steam cooled engines in our automobiles within a few years, is the prediction of Prof. Edward P. Culver, of the Princeton School of Engineering.

There will be no change in the engine, except the transfer of the heat, which enters the present radiator at the top, to the bottom, and the conversion of the radiator from a cooler into a steam condenser.

The greatest advantage of steam-cooling, says Prof. Culver, is it maintains the engine at a constant and most efficient running temperature, no matter what the temperature is outside.

## Good Business

Some people make chicken breeding pay; others find it a losing venture. But scarcely any one of whom we have heard ever did so well with them as the boy, Davison by name, whom we met at the fair, whether chickens really paid. "They pay my son," said the old man. "I bought him the chicken; I supply the feed; I buy the eggs from him, and he eats them."

We cannot hear a sound if he has less than about thirty or more than 10,000 vibrations a second.

## ECZEMA LASTED TEN YEARS

On Knees. Would Itch and Burn. Cuticura Heals.

"From the time I was a small child I was troubled with eczema on my knees. It broke out in a rash and would itch and burn so that I would scratch and cause eruptions. My stockings aggravated the break-out and I lost my rest at night on account of the irritation. Later it broke out on my arms. The trouble lasted about ten years."

"A friend recommended Cuticura Soap and Ointment so I purchased some and after using one box of Cuticura Ointment and two cakes of Cuticura Soap I was completely healed." (Signed) Miss Kathleen O'Connell, Port Dufferin, N. S.

Relay on Cuticura Soap and Ointment to keep your skin clear.

Sample Pack Free by Mail. Address: Canadian Agents, "The Canadian Soap Co., Ltd., Montreal, P. Q. Price: Soap, 25¢; Ointment, 25¢; Cuticura Shaving Stick, 25¢.

## History Of Aviation

The Evolution Of Flying From Its First Inception

The first to fly:—In a dirigible balloon was Henry Cliffland in 1852. It had a three-horse power steam engine.

—In an aeroplane driven by an engine was Orville Wright, on Dec. 17, 1902. He used a 16-horse-power engine.

—Ten miles in an aeroplane in Europe was Delagrange on June 22, 1908, at Milan.

—Over a mile in an aeroplane was Orville Wright, on Sept. 3, 1906.

—Over 1,000 feet high was Orville Wright, on Oct. 3, 1909, at Berlin.

—Across the English Channel was Bleriot in a monoplane on July 26, 1909.

—Across America from the Pacific to the Atlantic, over 4,300 miles, was Rodgers, 1911.

—Across the Atlantic in a seaplane was Commander Read, R.N.S., in 1918.

—direct from Newfoundland to the British Isles in an aeroplane were Alcock and Brown, in 1919.

—an airship across the Atlantic were General Maitland and Commander Scott, in the British R34.

—direct from the United States to Europe in a monoplane was Colonel Lindbergh in 1927.

## Enthusiastic Over Farming in the West

Representative of Norwegian Government Favorably Impressed With Conditions

Capt. K. S. Irgens, of Oslo, Norway, who made a tour of Western Canada along the lines of the Canadian National Railways as the representative of the Norwegian government, for the purpose of determining the advantages of this country for Norwegian farmers, has returned to the East to pursue his investigations. The captain expressed himself enthusiastically regarding the prosperous and progressive conditions he found wherever he went, and took away with him favorable impressions of the West generally. He is likely to convert the rest of the farm somewhere in one of the Western provinces. He met many of his countrymen during his trip, and everywhere found them doing well and very contented with the land of their adoption.

## SAVE THE CHILDREN

In Summer When Childhood Ailments Are Most Dangerous

Mothers who keep a box of Baby's Own Tablets in the house may feel that the little ones are safe, but it is not so. Stomach troubles, cholera, infantum and diarrhea carry off thousands of little ones every summer, in most cases because the mother does not have a safe medicine at hand to give promptly. Baby's Own Tablets relieve these troubles, or if given occasionally to the well child they will prevent their coming on. The Tablets are guaranteed by a government analyst to be absolutely harmless even to the new-born babe. They are especially good in summer because they regulate the bowels and keep the stomach sweet and pure. They are sold by medicine dealers or by mail at 25¢ cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

## A Reindeer Ranch

Raising reindeer for commercial purposes in Canada will be undertaken this year by the Dominion Reindeer Co., with headquarters at Vancouver; the company having imported some 6,000 head of reindeer from Alaska. This herd will be located on the vast grazing areas between the Athabasca and Great Slave lakes on three million acres secured for that purpose.

Minard's Liniment for burns.

## For Restless Babies

Warm weather is a trial to both mother and babe and the task of keeping the little one in perfect health is often very difficult. Probably the matter of proper food for the infant is of greatest concern to the average mother.

If you cannot nurse baby and it does not gain upon the breast milk give him Borden's Eagle Brand Milk—the food that has successfully reared hundreds of thousands of babies. Easy to prepare—just add boiled water as directed.

For more information, from time to time you will find an advertisement of Borden's Eagle Brand Milk, a food that has raised more healthy babies than all the prepared infant foods combined. Cut out the advertisement and mail it to The Borden Company, Limited, Montreal, and they will send you free of charge, instructions for feeding your baby, and a Baby Welfare Book and Baby Record Book. Or, just write the Company mentioning this paper and they will be sent.

Minard's Liniment for cuts and bruises.

## Things Worth Knowing About Firestone Gum-Dipped Tires

Firestone pioneered, developed, tested and placed on the market the Balloon Gum-Dipped Tire—the genuine FULL-SIZED Balloon Tire.

With half the usual air pressure, these tires are very soft and yielding. They absorb the holes, ruts and bumps in the road. They cushion the car and passengers from shocks and vibration.

Firestone Gum-Dipping—by which each tire is dipped in a tank of molten rubber and coated with pure gum—adds the extraordinary strength and flexibility which makes the Balloon construction practical.

Firestone Dealers are kept up-to-date on tire development and service—continually progressing and improving their ability to serve you better and save your money. See the nearest Firestone Dealer and let him handle your requirements.

## Little Helps For This Week

Teach me to do Thy will, for Thou art my God.—Ps. cxlvi. 10.

Small service is true service while it lasts.

Of friends, however humble, spurn not one.

The daisy, by the shadow that it casts, Proclaims the lingering dew-drop from the sun.

—William Wordsworth.

We can all be servants of God wherever our lot is cast; but He gives us different sorts of work, according as He fits us for it and calls us to it.

—George Eliot.

Service is our destiny in life or in death. Then let it be my choice. If to serve the living, and be fretted uncomplainingly; if I can assure myself of doing service, I may have home within.—George Meredith.

## Produced in Every Province

Alfalfa can be grown over the widest range of climate conditions of any legume yet grown in Canada. It is now being produced in every province from the Atlantic to the Pacific.

It Testifies for Itself.—Dr. Thomas' Electric Oil needs no testimonial of its powers other than itself. Whoever tries it for cuts or colds, for cuts or contusions, for sprains or burns, for pains in the limbs or body, will know that the medicine proves itself and needs no eulogium. This shows why this Oil is in general use.

Millions From Cowdroy Estate  
Eight million dollars will go to the Eschequer as death duty on the \$20,000,000 estate of Viscount Cowdroy, who died in London, May first.

Uncle in Slices—"Are you enjoying the winter sports, my dear?"

"Nieces"—"Rather. I'm engaged to three of them already."

## DYSENTERY WAS SO BAD BECAME ALARMED

Mrs. Wallace Pepper, R.J., No. 6, Simcoe, Ont., writes: "Last summer I was very bad with dysentery. I lost my appetite, and had severe pains in my abdomen they made me very faint. I desisted from my daily work, and so I hurried to the doctor. He told me the quickest way to get rid of it would be to take

Dr. Fowler's Wild Strawberry

"I took only part of a bottle and was completely relieved. I feel I cannot recommend it too highly."

This wonderful blood complaint remedy has been on the market for the past 80 years, put up only by The T. M. M. Co., Limited, Toronto, Ont.

## RESTORED TO GOOD HEALTH

Mother of Eleven Children Praises Lydia E. Pinkham's Vegetable Compound

Her Interesting Experience

Buckingham, Quebec.—"I am the mother of eleven living children, five months old. I am 38 years old and I have taken Lydia E. Pinkham's Vegetable Compound for weakness and my nerves. I knew of it from my sister, Dame Edouard Bellefleur of St. Eustache, Quebec. For five years I was in misery and was always ready to cry. Now I am so happy to have good health. My daughter, who is 18 years old, has also taken it and will be happy to recommend it to young girls."—DAME WILLIAM PARENT, Box 414, Buckingham, Quebec.

Why suffer for years from nervousness and other ailments common to women from early life to middle age, when Lydia E. Pinkham's Vegetable Compound will give you relief?

In a recent country-wide canvass of purchasers of Lydia E. Pinkham's Vegetable Compound, over 250,000 replies were received, and 38 out of every 100 reported they were benefited by its use.

**"BEAU GESTE" MADE  
ON ARIZONA DESERT**

Thousands of Players Spent Three Months at "Camp Herbert Brenon"

The screen version of one of the most popular romantic action novels in recent years, "Beau Geste," will make its first appearance on Thursday, Friday and Saturday, August 11, 12 and 13, at the Rex Theatre, Youngstown.

This thrilling story of romance, mystery and adventure in the French Foreign Legion with the theme of the devotion of three brothers powerfully depicted, has been transferred to the screen by Paramount on a scale never surpassed by any previous production.

For the filming of this novel, Director Herbert Brenon led an army of 2,000 men into the great American Desert for three months during which the exterior scenes were made. The camp was built in a sand basin 30 miles from any habitation and the entire company worked straight through, without

a day's rest, from 5:30 each morning till sunset.

Brenon took his company to Burlingame, California—a 900 mile trip, for a few cranks of the camera.

No obstacle was permitted to stand in the way of making it as fine as possible. The director was given the selection of any player in motion pictures. Months were spent in preparation and more months in filming. Hundreds of the West's finest riders were brought together as were 1500 of the world's fastest horses and 50 camels.

The smallest part in the picture was filled with the same care that was given to casting the featured roles.

Mr. and Mrs. W. A. Hurley are visitors in Calgary this week.

It does no good for a man to stop, look and listen unless he thinks.

Success is sweet, but its secret is sweat.

**A MIGHTY BLACKSMITH**

"A section of the show which proved a great attraction was the shoeing forge, where several mighty men were at work. Perhaps the mightiest was Mr. J. C. Price, of the Forge, Bearland, Gloucester. Besides being an expert blacksmith who has won numerous prizes for shoeing, including some at this show, he is recognized as one of the strongest men in England and an ex-champion weight lifter," says the Observer in its account of a recent agricultural show.

"At intervals he has amused and amazed fellow competitors by exhibitions of his strength. One of his extraordinary feats is to tie a long rope in a slip knot around his neck and let two men pull as hard as they can to try to strangle him; by extending the muscles of his throat, which are remarkably strong, he is able to prevent the rope tightening and choking him. By one grip he can hold his own in a tug-of-war with ten men. Another accomplishment is to drive nails into wood with his hand.

"Mr. Price, who is 44, does no training. He smokes a little but does not drink alcohol, and although he eats rather heavily he has no special diet. He is hopeful of creating a new weight-lifting record shortly."

**Motor Roads Marked For Tourists**

Directions for tourists in the southern part of the province have been improved this season by the work of the Alberta Development Board (Southern Section). New markings have been placed on the Blue trail between Banff and the International Boundary, the Yellow trail between Calgary and Walsh, the Red trail between Calgary and Alaska and the Sunshine trail between Calgary and Red Deer. This organization has also distributed a large number of maps showing the best routes to Alberta's scenic spots, where many tourists are holidaying this summer.

To let a man know that you believe in him is often to awaken in his conscience a decent instinct, even though he may have slipped so far down the social ladder as to regard truth and honor as mere figures of speech.

**SIXTH FORTNIGHTLY****CROP REPORT**

Issued by Department of Agriculture Government of Alberta, Edmonton July 30, 1927.

Crops all over the province have made steady progress during the past two weeks and continue to give promise of the greatest harvest Alberta has ever reaped, according to the information reaching the Department of Agriculture. Wheat is practically 100 per cent. in head, the same is the case with barley and oats are reported to be from 60 to 75 per cent. headed out.

Hot weather during this period has assisted materially in the growth of the crops, and with occasional showers the moisture stored in the ground is considered sufficient to carry the crop to maturity, and all grain in head is filling rapidly.

Harvesting of rye has commenced in a number of districts in the south of the province and a splendid yield is reported. Fall wheat has made especially good progress and promises a heavy crop. It is reported as unlikely that harvesting will be at all general until possibly August 20.

A number of rather severe hailstorms have done considerable damage in scattered districts, but these generally have been purely local in character and their effect on the total yield of grain of the province will not, it is expected, be a serious one. Practically no injury to crops from insect pests is reported and no frost is reported as yet in any section of the province.

The area in the south and south-east of the province reports prospects of the heaviest crop in a number of years and that conditions are ideal for filling and ripening. Sugar beets and the second cutting of alfalfa are making rapid growth and so far very little irrigation has been necessary.

While warm weather would be beneficial, crops in the Peace River and Grande Prairie districts are giving promise of a better than average yield, particularly improvement this season as compared with last year being noted in the case of the oat crop, and all grains show a uniformly good vigor and color.

A start has been made with haying in many sections of the province and a good crop both of wild and cultivated hay is being put up. Dairymen and ranchers report that pasture growth is rank and that all livestock is in good condition.

**Lost Shipment Of****Buffalo To North**

The final shipment of 218 buffalo left the Wainwright Park on Tuesday, making a total of 190 animals to be moved to their new northern home this season. Owing to the rapid increase in the number of buffalo in the park at Wainwright, shipments to the north in three years have totalled 5,585 head, and of this number only six failed to stand the long trip by rail and water to their new domain.

**Alberta Death Rate Low**

Alberta has the third lowest death rate among the provinces of the Dominion, according to the vital statistics for 1926. The rates by provinces are as follows: Saskatchewan, 7.4 per thousand; Manitoba, 8.3; Alberta 8.5; British Columbia, 9.6; Prince Edward Island, 10.1; Ontario, 11.4; Nova Scotia, 11.8; New Brunswick, 12.2 and Quebec, 14.5. The rate in Alberta, it is stated, is increased to some extent by the death of tubercular patient who come to this province for their health.

**Great Pier Dedicated to Empire Service**

1. New G.P.R. Pier at Vancouver. 2. Bronze plaque unveiled by Mayor Taylor of Vancouver.

One notable feature of Greater Vancouver's celebration of the Diamond Jubilee of Confederation—and one that no other city in the Dominion can boast of depicting—was the dedication and official opening of the new \$6,000,000 Canadian Pacific Pier B-C.

The new mammoth pier is the second longest in the world, and was planned with an eye to a prosperous future when Vancouver will be one of, if not the biggest, port on the Pacific coast, and designed to accommodate at least two of the greatest liners built.

It is a far cry from the first wooded pile ocean docks built by the Canadian Pacific in the early spring of 1887 when Vancouver was a city of stumps and possibilities to the present pier with nearly 3,000 feet of berthing space available and accommodation for the cargoes of a dozen of even the most modern ocean grey-

hounds. Representing the last word in modern machine construction, the new pier is also notable for the pleasing manner in which the practical has been combined with the artistic.

The Canadian Pacific is interested chiefly in the trade with the Orient, Australia and New Zealand. Although imports and exports are of a mixed character, the most valuable single article is silk. Silk, not much used in the past, is now being transferred from boat to rail with the least possible delay. Facilities embodied in the construction of this pier ensure the rapid and careful handling of all cargoes.

While designed primarily for the use of its own ships, the C.P.R. will allow pier B-C to be used by the ships of other lines. Its length of 1,140 feet permits the docking on either side, of the largest of the present day trans-Pacific boats—the Empress of Canada, 610 feet in length—with a

smaller vessel. Its width of 331 feet permits a moderate sized boat to be docked at the offshore end, at the same time that either or both sides of the pier are in use.

A special feature of the construction of the pier is that a promenade is constructed down each side of the pier leading from the head house over the roofs of the freight sheds. Connections are made from this promenade to the ships by a long gangway so that passengers may embark or disembark without hindering the freight handling on the lower deck.

In officially opening the pier Mayor Taylor unveiled a magnificent bronze plaque, a gift of private citizens of Vancouver, which bears the following inscription: "Piers B and C, Formerly Opened and Dedicated to the Canadian Pacific Empire Service during Greater Vancouver's Celebration of Canada's Diamond Jubilee of Confederation by Louis D. Taylor, Mayor of Vancouver."
